```java
1 package StringFunctionsInJava;
2
3 public class StringFunctions {
4
5     public static void main(String args[])
6     {
7         String str1 = "Hello";
8         String str2 = "World";
9         String str3 = "Hello     World";
10        String str4 = new String("Welcome");
11
12        System.out.println("Str1 is: " + str1);
13        System.out.println("Str2 is: " + str2);
14        System.out.println("Str3 is: " + str3);
15        System.out.println("Str4 is: " + str4);
16
17        System.out.println("\n");
18
19        System.out.println("Str1 in lowercase is: " + str1.toLowerCase());
20        System.out.println("Str3 in Uppercase is: " + str3.toUpperCase());
21        System.out.println("Str2 Replace Value: " + str2.replace('W', 'p'));
22        System.out.println("Str1 lenght is: " + str1.length());
23    }
24
25 }
26
```
