```java
1 package StringToDataTypes;
2
3 public class ConvertString {
4
5     public static void main(String args[])
6     {
7         // String to Boolean
8         String Str1 = "False";
9
10         boolean bol = Boolean.parseBoolean(Str1);
11         System.out.println("The boolean result is: " + bol);
12
13         //String to Integer
14         String Str2 = "500";
15         int num1 = 300;
16
17         int num2 = Integer.parseInt(Str2);
18         int add = num1 + num2;
19         System.out.println("Integer result is: " + add);
20
21         //String to Double
22         String Str3 = "301.92";
23         Double dob = 45.78;
24
25         Double dob1 = Double.parseDouble(Str3);
26         Double adddob = dob + dob1;
27         System.out.println("Double result is: " + adddob);
28     }
29
30 }
31
```
